

LEE-LOK[®]

Disposable Needles for...
Bone Marrow Harvest / Transplantation

- Sterile
- Non-Toxic
- Non-Pyrogenic

The disposable single-patient Lee Needle is specially designed for allogeneic and autologous bone marrow harvest-transplantation procedures

LEE-LOK[®]

Please note these features:

- **Comfortable handle**
The patented handle design incorporates a recessed Luer fitting for a comfortable grip. Plastic handle wings give physician control and serve as a position reference.
- **One-piece stylet**
The one-piece stylet provides for procedure efficiency and the lock notch assures proper needle/stylet bevel alignment.
- **LUER-LOK[™] Hub**
The Luer fitting provides a secure connection and allows the use of either slip type or Luer locking syringes.
- **Tri-Point Tip**
The precision tip is sharpened at the 25° bevel to provide a large harvest area.
- **Laser construction**
Multiple cortical entries require maximum needle strength. The LEE-LOK[®] stainless steel needles are laser welded to provide a positive lock and insure against slippage or breakage.
- **Versatile size options**
Transplant-Harvest needles are available in two gauges and three lengths for Pediatric, Adult and Large Adult patients.
- **Sterile packaging**
LEE needles are blister packaged with easy-peel TYVEK[™] for Operating Room presentation, certified Sterile, Non-Toxic and Non-Pyrogenic.
